TO CORRESPONDENTS.

"W. B. D."-Our statement as to the population of New-York City is correct. The figures were taken from the official records—the United States census of 1860, and the State census of 1865. The apparent de crease from '60 to '65 was owing to the manta which prevailed to get residences in the vicinage of the city-in Brooklyn, Williamsburgh, Jersey City, Westchester County, Staten Island, etc.—so that when the census of 1865 was taken, thousands, although mostly doing business here, were enrolled as residents of the places we have mentioned. The increase of buildings in New-York since then has provided for the increase of population the total of which is now, no doubt, larger than that of 1860 and nearly 1,600,000...."A Reader"—The resignation of President Johnson would not compel the Senate to relinquish the Impeachment trial ...
